1. Foreword

TO WHOM IT MAY CONCERN

Vessel : M/V YASA LOTUS

IMO : 9955624

Contains the parameters of the vessel M/V YASA LOTUS with a report number of 2520254E that is listed, created as a result of the tested parameters of the Potable Water Sample. The results can be found in the section table numbers five and six in the report.

The test have been done in our labs with the lead and suggestions of MLC(Maritime Labour Convention). The test procedures and limits have been performed by ISO certification which based on international standards.

2. Sample and System details

Vessel	M/V YASA LOTUS	Sample Collection Date	23/08/2025 15:00:00
IMO No	9955624	Lab Receipt Date	05/09/2025 14:00:00
AWB No	657 489 1713	Test performance start date	05/09/2025 14:15:00
Type of Sample/ Container No:	2520254E	Test performance end date	15/09/2025
Serial Number	-	Analyst	Okan PELİT Fatma ŞİMŞEK
Sampling Point	Fountain	Sampled by	1st Eng. Mert Akçay
		Port / Vessel Position	ORAN (ALGERIA) / 35°42.773'N - 0°38.147'W

Information

1 : According to ISO 5667-3 standard, sample was preserved

8 : Before analyze; sample was filtered by 0.45 µm filter

80 : The following opinion is included in "Guide to Ship Sanitation, 3RD Edition, Table 2-2" :

"Hardness below 60 mg/l poses high risk of copper corrosion. Too low hardness should trigger evaluation of corrosive processes in the piping and existence of heavy metals due to corrosion."

Based on this view; Since the metal results were appropriate, the hardness parameter was also considered appropriate.

*A: Appropriate, NA: Not Appropriate

Note

1. Analysis report covers the incoming sample to laboratory.

2. This report and results shall not be copied and printed partially or completely without permission of Çevre Industrial Analysis Laboratory for commercial and advertising purposes.

3. In the sample analyzed, technical and legal responsibility for determining the procedures from taking the sample to the laboratory and the groups and parameters to be examine, belongs to party who takes the sample.

4. The test report without sign is not valid.

5.Descriptive information about the samples / sampling in the analysis report has been declared by the customer. Our laboratory is not responsible for the legal losses.

6.Çevre Laboratory Group having been audited by ABS and having given a satisfactory practical demonstration of the "Biological Testing of Ballast Water Management System During Commissioning Following Installation" service. Also Çevre Laboratory Group is recognized by ABS as a Service Supplier to provide services which ABS Surveyors may rely on to make decisions affecting classification or statutory surveys.

Information

30 : Sodium Thiosulfate was added according to ISO 19458.

34 : EPA stated the following opinion for this measurement : It has no health effects; it is an analytic method used to measure the variety of bacteria that are common in water.
